# The New Generation

Polestar Optimisation

# Take Your Driving Experience To A Whole New Level

If there is one thing we know at Polestar, it's that there's always room for improvement. In our Polestar optimisation program we focus on different key areas that will enhance your personal driving experience, taking it to a new level of control and excitement.

## Five Optimisations In One

No less than five important performance areas have been optimised to provide a more balanced and dynamic driving experience. Together they deliver faster and more exact responses to your commands, giving you a car with a clear and predictable behaviour. Important for all forms of active driving, regardless if it is on the racetrack or the open road. Below you can learn more about what our engineers have done to take driving to the next level.

### Throttle Response

Throttle response has been recalibrated to provide improved feedback and acceleration reaction - ideal for overtaking or during active driving on a twisting road.

### Off-throttle Response \*

The engine and gearbox have been calibrated to provide faster response when the driver suddenly releases the throttle, providing predictability and control.

### Gearshift Speed \*

Shift speed has been increased, allowing the car to accelerate faster and react more directly to driver input.

### Gearshift Precision and Gear Hold \*

Gearshift have been optimised to provide a more precise driving experience with faster acceleration. Shift points have been calibrated to utilise the optimised mid-range engine performance, while the gear-hold function maintains the same gear when cornering with high lateral g-force.

### Engine Performance

All Drive-E Optimisations are made to provide greater performance in the engine's mid-range powerband - perfect for the sporty driver when overtaking, entering a highway or exiting a corner.
